

# Backend Software Engineer

Nimbus Cloud Systems | Bengaluru, India (Hybrid) | Experience: 2-4 years

---

## About the Role

We are looking for a Backend Software Engineer to design, build, and maintain scalable APIs and services powering our cloud platform. You will work closely with frontend and DevOps teams to ship reliable, high-performance features.

## Key Responsibilities

- Design and develop RESTful APIs using Python (Django/Flask) or Node.js
- Write efficient SQL queries and optimize database schemas (PostgreSQL/MySQL)
- Deploy and monitor services on AWS (EC2, S3, Lambda, RDS)
- Implement unit and integration tests to ensure code quality
- Collaborate using Git-based workflows and participate in code reviews
- Work with Docker and Kubernetes for containerized deployments
- Debug production issues and improve system reliability

## Required Skills

- Strong proficiency in Python
- Experience with Django or Flask frameworks
- Solid understanding of relational databases (SQL, PostgreSQL/MySQL)
- Familiarity with AWS cloud services
- Experience with Git version control
- Understanding of RESTful API design principles
- Basic knowledge of Docker

## Preferred Skills

- Experience with Kubernetes
- Familiarity with CI/CD pipelines (Jenkins, GitHub Actions)
- Knowledge of Redis or other caching systems
- Exposure to microservices architecture

## Education

Bachelor's degree in Computer Science, IT, or related field

## Soft Skills

- Strong problem-solving ability
- Good communication and teamwork
- Ability to work independently in a fast-paced environment
